For : INTERACTIVE WAGERING SYSTEM
WITH CRITERIA WAGERING

Hon. Assistant Commissioner
for Patents
Washington, D.C. 20231

TRANSMITTAL LETTER FOR
ORIGINAL PATENT APPLICATION

Sir:

Transmitted herewith for filing are the
[X] specification; [X] claims; [X] abstract; [X] declaration;
[X] power of attorney; for the above-identified patent
application.

Also transmitted herewith are:

[X] 10 sheets of:

[x] Formal drawings.

[] Informal drawings. Formal drawings will be
filed during the pendency of this application.

[X] An assignment of the invention to ODS Technologies, L.P.

[X] A check in the amount of \$40.00 to cover the
recording fee.

[] Please charge \$40.00 to Deposit Account No. 06-1075
in payment of the recording fee. A duplicate copy
of this transmittal letter is transmitted herewith.

[] An Information Disclosure Statement.

Express Mail No.:
EH623265872US

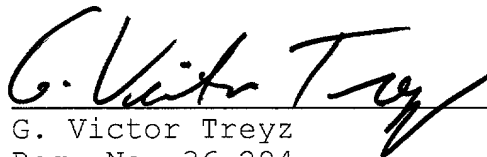

03/01/00

The filing fee has been calculated as shown below:

FOR	NUMBER FILED	NUMBER EXTRA	RATE	FEE
BASIC FEE				\$ 690.00
TOTAL CLAIMS	33 - 20 = 13		x \$ 18 =	\$ 234.00
INDEPENDENT CLAIMS	3 - 3 = 0		x \$ 78 =	\$ 0.00
[] A MULTIPLE DEPENDENT CLAIM			+ \$260 =	\$.00
TOTAL				<u>\$ 924.00</u>

- [X] A check in the amount of \$ 924.00 in payment of the filing fee is transmitted herewith.
- [X] The Commissioner is hereby authorized to charge payment of any additional filing fees required under 37 C.F.R. § 1.16 in connection with the paper(s) transmitted herewith, or credit any overpayment of same, to Deposit Account No. 06-1075. A duplicate copy of this transmittal letter is transmitted herewith.
- [] Please charge \$ _____ to Deposit Account No. 06-1075 in payment of the filing fee. A duplicate copy of this transmittal letter is transmitted herewith.

INTERACTIVE WAGERING SYSTEM WITH CRITERIA WAGERING

Background of the Invention

5 This invention relates to interactive
wagering, and more particularly, to interactive
wagering applications that allow wagering criteria to
be established by users. When a wagering opportunity
arises that satisfies the user's criteria, the
application may automatically place a wager, notify the
10 user, or take other appropriate actions.

Wagering is a popular leisure activity. For
example, many racing fans wager on events such as
horse, dog, and harness racing. However, it may be
inconvenient to attend racing events in person. Not
15 all racing fans have sufficient time to visit
racetracks as often as they would like and some fans
have difficulties in obtaining suitable transportation
to the track. Off-track betting establishments are
available for fans who cannot attend racing events in
20 person, but fans must still travel to the off-track
betting establishments.

As a result, systems have been developed in
which fans may place off-track wagers using personal
computers connected to the Internet, standard
25 telephones, or set-top boxes.

5 certain selected actions may be taken by the system.

Summary of the Invention

10 system in which an interactive wagering application may provide a user with an opportunity to establish various wagering criteria. When a wagering opportunity becomes available that satisfies the user's criteria, the wagering application may take an appropriate action.

15 Wagering criteria may include any suitable
wagering-related parameters, such as a particular
track, horse, jockey, trainer, track surface, race
distance, silks (jockey colors), type of race (e.g.,
claiming, states, etc.), odds or changes in odds, class
20 ratings, gate position, purse amount, claim amount,
weather conditions, etc. Users may select the criteria
and multiple criteria may be established. For example,
a user may desire to automatically place a wager or be
notified of a wagering opportunity whenever the horse
25 "Cat Thief" is running and the jockey is "Pat Day."

30 subscription management system or other suitable
equipment in the wagering system.

FIG. 4 is an illustrative display screen that the interactive wagering application may display to allow the user to search for a particular horse to use as a wagering criteria in accordance with the present invention.

FIG. 6 is an illustrative display screen that the interactive wagering application may display to provide the user with an opportunity to select a wager type and wager amount for the application to use when placing automatic wagers whenever the selected wager criteria have been satisfied in accordance with the present invention.

FIG. 8 shows how the user may select a desired set of wagering criteria from the screen of FIG. 7 using a movable highlight region in accordance with the present invention.

FIG. 9 is an illustrative display screen showing how wager criteria details may be displayed as a partial-screen overlay on top of an existing display screen provided by the interactive wagering application.

FIG. 10 is a flow chart of illustrative steps involved in using the wagering criteria features of the interactive wagering application in accordance with the present invention.

10 Detailed Description of the Preferred Embodiments

An illustrative interactive wagering system 10 in accordance with the present invention is shown in FIG. 1. Aspects of the invention apply to various different types of wagering, but are described herein primarily in the context of interactive wagering on races (e.g., horse races) for specificity and clarity.

Races may be run at racetracks 12, which may be located at various geographic locations. Races run at the racetracks may be simulcast to television viewers. For example, simulcast videos may be provided to users with satellite receivers or to off-track betting establishments via satellite.

System 10 may be used to provide an interactive wagering service to users of various user equipment. An interactive wagering application may be used to provide the wagering service. The interactive wagering application may run locally on the user equipment (e.g., on a set-top box, personal computer, cellular telephone, handheld computing device, etc.) or may run using a client-server or distributed architecture where some of the application is

implemented locally on the user equipment in the form of a client process and some of the application is implemented at a remote location (e.g., on a server computer or other such equipment in the system) as a
5 server process. These arrangements are merely illustrative. Other suitable techniques for implementing the interactive wagering application may be used if desired.

Real-time videos from racetracks 12 may also
10 be provided to video production system 14 for distribution to users as part of a television wagering service (i.e., a wagering-related television channel or Internet-delivered service or the like). If desired, multiple simulcast videos may be provided to video
15 production system 14 in real-time. Talent (e.g., commentators) for the television wagering service provided by the interactive wagering application may be located at studio 16. Studio 16 may provide a video feed containing commentary and the like to video
20 production system 14. Graphic overlays for the television wagering service may be added to the service at video production system 14.

The television wagering service may use video production system 14 to combine selected video segments
25 from desired racing simulcasts with the video feed from studio 16 and suitable graphic overlays. If desired, video production system 14 or a separate facility may be used to reformat simulcasts from racetracks 12. For example, if racetracks 12 provide simulcasts as
30 traditional analog television channels, video production system 14 (or a separate facility) may convert these simulcasts or portions of these

simulcasts into digital signals (e.g., digital video signals) or into a different number of analog signals. Digital video signals may require less bandwidth than analog video signals and may be appropriate for
5 situations in which videos are to be transmitted over either high or low bandwidth pathways. Low bandwidth pathways may include telephone lines, the Internet, etc.

Video production system 14 may be used to
10 provide a television wagering service that includes selected simulcast videos, video from studio 16, and graphic overlays to television distribution facilities 18 (for redistribution to user television equipment 22 and user computer equipment 20), to user computer
15 equipment 20, and to user telephone equipment 32 (if user telephone equipment 32 has a display capable of displaying moving images). Television distribution facilities 16 may be any suitable facilities for supplying television to users, such as cable system
20 headends, satellite systems, broadcast television systems, or other suitable systems or combinations of such systems. User computer equipment 20 may be any suitable computer equipment that supports an interactive wagering application. For example, user
25 computer equipment 20 may be a personal computer. User computer equipment 20 may also be based on a mainframe computer, a workstation, a networked computer or computers, a laptop computer, a notebook computer, a handheld computing device such as a personal digital
30 assistant or other small portable computer, etc.

Each of television distribution facilities 18 is typically located at a different geographic

location. Users with user television equipment 22 may receive the television wagering service from an associated television distribution facility. User television equipment 22 may include, for example, a television or other suitable monitor. A television may be used to watch the television wagering service on a traditional analog television channel. User television equipment 22 may also include a digital or analog set-top box connected to a television distribution facility 16 by a cable path. A digital set-top box may be used to receive the television wagering service on a digital channel. If desired, user television equipment 22 may contain a satellite receiver, a WebTV box, a personal computer television (PC/TV), or hardware similar to such devices into which set-top box capabilities have been integrated. A recording device such as a videocassette recorder or digital recording device (e.g., a personal video recorder or digital video recorder based on hard disk drives or the like) may be used in user television equipment 22 to store videos. The recording device may be separate from or part of the other components of user television equipment 22.

User computer equipment 20 may receive the television wagering service using a video card or other video-capable equipment to receive analog or digital (e.g., moving picture experts group or MPEG) videos from a television distribution facility. User computer equipment 20 may also receive the television wagering service directly from video production system 14 using, for example, a modem link. If desired, the video for the television wagering service may be compressed (e.g., using MPEG techniques). This may be useful, for

example, if the path to user computer equipment 20 is a
modem connection using telephone links. If video
production system 14 is only used to serve user
computer equipment 20 without traditional analog
5 television capabilities, video production system 14 may
only need to supply such digitally-compressed video
signals and not analog television signals.

Video clips of races and other simulcast
information may be provided to users in the form of a
10 television wagering service or by an interactive
wagering service provided by the interactive wagering
application. If desired, race-related videos may be
provided to the user by using video production system
14 or other suitable equipment to route appropriate
15 video clips from the simulcasts to the user in real
time. Video clips may also be stored for later
viewing. For example, one or more video servers
located at racetracks 12, video production system 14,
television distribution facilities 18, or other
20 suitable locations may be used to store video clips.
The stored videos may then be played back in real time
or downloaded for viewing at user television equipment
22, user computer equipment 20, or user telephone
equipment 32. The video clips may contain videos of
25 races, commentary, interviews with jockeys, or any
other suitable race-related information. If desired,
real-time or stored videos may be provided from
racetracks 12 directly to user television equipment 22,
user computer equipment 20, or user telephone equipment
30 32 over the Internet or other suitable communications
paths without involving video production system 14.
Videos may also be provided by routing video signals

through equipment located elsewhere in system 10. For example, videos may be routed through transaction processing and subscription management system 24.

Transaction processing and subscription management system 24 may contain computer equipment 26 and other equipment for supporting system functions such as transaction processing (e.g., handling tasks related to wagers, product purchasing, adjusting the amount of funds in user accounts based on the outcomes of wagers, video clip ordering, etc.), data distribution (e.g., for distributing racing data to the users), and subscriber management (e.g., features related to opening an account for a user, closing an account, allowing a user to add or withdraw funds from an account, changing the user's address or personal identification number, etc.). Databases within transaction processing and subscription management system 24 or associated with system 24 may be used to store racing data, wagering data and other transaction data, and subscriber data such as such as information on the user's current account balance, past wagering history, individual wager limits, personal identification number, billing addresses, credit card numbers, bank account numbers, social security numbers, etc. Using such databases may allow the user to access information more quickly and allows for central administration of the wagering service.

If desired, racing videos and other services may be provided using servers and other equipment located at transaction processing and subscription management system 24. For example, video clips may be provided to the user on-demand. Interactive

OFFICIAL STATE

5 related to the advertisement to the user.

Statistical racing data such as the post times for each race, jockey names, runner names and the number of races associated with each track, handicapping information (e.g., information on past performances such as the number of wins and losses for the past year, etc.), and weather conditions at various tracks may be provided by racing data collection and processing system 28. Some of the data may be collected from racetracks 12 and some may be provided by third party information sources such as Axcis Pocket Information Network, Inc. of Santa Clara, California or other suitable data sources.

Racing data may also be provided from
30 totalisators 30. Totalisators 30 are the computer
systems that may be used to handle wagers made at the
racetracks, made at off-track betting establishments,

and made using interactive wagering system 10.
Totalisators 30 generate wagering odds in real time.
Totalisators 30 generate these odds based on
information on which wagers are being placed (e.g.,
5 based on information on which wagers are being placed
on races at racetracks 12). Totalisators 30 are
available from companies such as Amtote International,
Inc. of Hunt Valley, Maryland. Totalisators 30 may be
associated with individual racetracks 12 or groups of
10 racetracks 12. Totalisators 30 may communicate with
one another using a communication protocol known as the
Intertote Track System Protocol (ITSP). This allows
totalisators 30 to share wagering pools. Totalisators
30 may provide racing data including information on the
15 current races at racetracks 12, the number of races
associated with each racetrack, win, place, and show
odds and pool totals for each horse or other runner,
and exacta, trifecta, and quinella payoff predictions
and pool totals for every possible combination of
20 runners. Totalisators 30 may also provide current odds
and other real-time racing data for other types of
wagers. Totalisators 30 may provide the time until
post time for each race.

Totalisators 30 may provide race results,
25 such as the order-of-finish list for at least the first
three positions and payoff values versus a standard
wager amount for win, place, and show, for each runner
in the finish list. Payoff values may be provided for
winning complex wager types such as exacta, trifecta,
30 quinella, pick-n (where n is the number of races
involved in the pick-n wager), and daily double. The

05516423 "030100

payoff values may be accompanied by a synopsis of the associated finish list.

Totalisators 30 may also provide program information of the type typically provided in printed racing programs. Such program information may include early odds, early scratches, race descriptions (including the distance of each race and the race surface - grass, dirt, artificial turf, etc.), allowed class ratings (based on a fixed ratio of external criteria), purse value (payoff to winning runner), allowed age range of runners, and the allowed number of wins and starts for each runner.

If desired, some of the information provided to transaction processing and subscription management system 24 by totalisators 30 (such as the program information or other suitable racing data) may be provided by racing data collection and processing system 28. Similarly, some of the information provided to transaction processing and subscription management system 24 by racing data collection and processing system 28 may be provided by totalisators 30. Moreover, the foregoing examples of different suitable types of racing data are merely illustrative. Any suitable data related to racing may be provided to transaction processing and subscription management system if desired.

Transaction processing and subscription management system 24 provides the racing data to users at user television equipment 22, user computer equipment 20, and user telephone equipment 32 for use in following race results and developing wagers. If desired, racing data may be provided to users using

paths that do not directly involve transaction processing and subscription management system 24. For example, racing data may be provided from racing data collection and processing system 28 to user television equipment 22, user computer equipment 20, or user telephone equipment 32 using the Internet or other suitable communications paths.

User telephone equipment 32 may be a conventional telephone, a cordless telephone, a cellular telephone or other portable wireless telephone, or any other suitable telephone equipment. Users at user television equipment 22 and user computer equipment 20 may view information on the racing data on a television or other suitable monitor. Users at user telephone equipment 32 may listen to racing data using an interactive voice system. User telephone equipment 32 may be based on cellular telephones with displays. Users may view racing data displayed on such displays.

Users who wish to place wagers may establish an account at transaction processing and subscription management system 24. An account may also be established at one of totalisators 30. The user and the interactive wagering services may have their own bank accounts at financial institutions 38. A user may set up an account electronically by using user television equipment 22, user computer equipment 20, or user telephone equipment 32 to interact with the subscriber management functions of transaction processing and subscription management system 24. If desired, accounts may be established with the interactive wagering service with the assistance of customer service representatives at customer service

facility 36. Customer service facility 36 may be at the same location as transaction processing and subscription management system 24, may be part of system 24, or may be located remote from system 24.

- 5 Customer service representatives at customer service facility 36 may be reached by telephone. If user telephone equipment 32 is used to access the interactive wagering service, for example, user telephone equipment 32 may be used to reach the
- 10 customer service representative using communications path 42. If user television equipment 22 or user computer equipment 20 is being used with the service, a telephone at the same location as that equipment may be used to reach the customer service representative.

- 15 The user's identity may be checked using social security number information or other identification information with the assistance of subscriber verification facility 40. The services of subscriber verification facility 40 are used to ensure
- 20 that the user lives in a geographic area in which wagering is legal, that the user is of a legal age, and that the identification information (e.g., the user's social security number) matches the name provided by the user. If the user is using a cellular telephone or
- 25 handheld computing device, the user's present physical location may be determined by determining which general part of the cellular telephone network is being accessed by the user or by using the cellular network or a handset-based location device such as a global
- 30 positioning system (GPS) receiver in the body of the cellular telephone to pinpoint the user's location. This location information may be used to verify that

the user is located in a geographic area where wagering is legal.

In a typical enrollment process, the user provides personal information to the interactive wagering service and provides funds with a credit card or funds from the user's bank account. The interactive wagering service sets up an account for the user at transaction processing and subscription management system 24 and directs one of totalisators 30 to set up a new account for the user at the totalisator. The totalisator is also directed to credit the user's account to reflect the amount of funds provided by the user. After the user places a wager and wins or loses, the totalisator adjusts the user's totalisator account to reflect the outcome of the wager. The totalisator may periodically inform the interactive wagering service of the adjusted balance in the user's account. This may be accomplished using any suitable technique (e.g., periodically, continuously, on-request, etc.). For example, reports may be collected periodically (e.g., once a day in an end-of-day report) and provided to the interactive wagering service to reconcile the account balances at transaction processing and subscription management system 24 with the account balances at totalisators 30.

If the user makes a balance inquiry, the inquiry may be passed to the appropriate totalisator by transaction processing and subscription management system 24. If the user is charged a fee for subscribing to the service, the service may debit the fee from the user's account at the transaction processing and subscription management system 24.

5
10
15

20

25

30

example, the user may use a remote control or wireless keyboard to navigate the various menus and selectable options. With a personal computer, the user may use a keyboard, mouse, trackball, touch pad, or other
5 suitable input or pointing device. With a cellular telephone with a display, the user may use buttons on the telephone. When the user has made appropriate selections to define a desired wager, the user television equipment, user computer equipment, or user
10 telephone equipment may transmit wagering data for the wager to transaction processing and subscription management system 24.

Users with telephones may also interact with the service using an interactive voice response system
15 located at transaction processing and subscription management system 24. The interactive voice response system may present menu options to the user in the form of audio prompts (e.g., "press 1 to select a \$2 wager amount," etc.). The user may interact with the service
20 be pressing the corresponding buttons on a touch tone telephone. User telephone equipment 32 that is based on cellular telephones allows the user to interact with the wagering service in this way. User telephone equipment 32 that is based on cellular telephones with
25 messaging and display capabilities also allows the user to interact visually with the interactive wagering service.

The components of system 10 may be interconnected using various communications paths 44.
30 Communications paths 44 may include satellite paths, coaxial cable paths, fiber-optic paths, twisted pair paths, other wire or cable-based links, wireless paths

through free space, or any other suitable paths or combination of such paths. Communications over paths 44 may involve analog transmissions, digital transmissions, wireless transmissions, microwave transmissions, radio-frequency transmissions, optical transmissions, audio transmissions, or any other suitable type of transmissions or combination of such transmissions. Communications may involve Internet transmissions, private network transmissions, packet-based transmissions, television channel transmissions, transmissions in the vertical blanking interval of a television channel or on a television sideband, MPEG transmissions, etc. Communications may involve wireless pager or other messaging transmissions. Communications paths 44 may include cable connected to cable modems, digital subscriber lines, integrated services digital network (ISDN) lines, or any other suitable paths. Examples of suitable communications paths are described below. Those examples are, however, merely illustrative. Any of the communications path arrangements described above or other suitable arrangements may be used if desired.

Communications paths that carry video and particularly uncompressed analog video or lightly-compressed or full-screen digital video generally use more bandwidth than communications paths that carry only data or that carry partial-screen digital video. For example, if it is desired to transmit high-quality simulcasts of races from racetracks 12 to video production system 14, analog or digital videos may be transmitted from racetracks 12 to video production system 14 over path 44a using satellite links. Video

may be transmitted from studio 16 to video production system 14 over path 44b using a satellite link or a high-speed terrestrial path such as a fiber-optic path. Studio 16 may also be located at the same site as video production system 14, thereby avoiding the need for a long-haul transmission path. Videos may be transmitted from video production system 14 to user computer equipment 20 over path 14c using a modem link (using, for example, a digital subscriber line, a telephone network link, a wireless link etc.) The modem link may be made over a private network.

A user with a cable modem may connect a personal computer or other such user computer equipment 20 to an associated cable system headend using path 44d. (The headend in such an arrangement would be one of the television distribution facilities 18 shown in FIG. 1.) The user may then receive videos from the headend via cable modem. Videos may be provided to the headend over path 44e using a network link, fiber optic links, cable links, microwave links, satellite links, etc. A user with a set-top box or similar device (shown in FIG. 1 as user television equipment 22) may also receive videos from a cable system headend using a cable modem or other such communications device over path 44f. In addition, a user with user television equipment may receive videos over the Internet or a private network using a telephone-based modem or other such communications device using path 44g. In a system with distributed processing, interactive wagering services may be provided using a television distribution facility 18 that includes equipment that supplements or replaces at least some of the equipment

at transaction processing and subscription management system 24.

If desired, user television equipment 22 or user computer equipment 20 may receive analog or
5 digital videos from an associated television distribution facility over the communications paths normally used to distribute television programming (e.g., paths 44f and 44d). For example, videos may be received as part of a dedicated interactive wagering
10 service television channel. If videos are provided as digital signals (e.g., MPEG signals), 10 or more digital videos may be carried on a single analog channel (or one digital video may be carried on one-tenth of the bandwidth of an analog channel). If the
15 videos are not full-screen videos, even more videos may be simultaneously provided without a loss of image quality.

Racing videos may be provided to user telephone equipment 32 over a partially-wireless
20 telephone Internet link or other telephone link using path 44n.

If desired, racing data may accompany the racing videos along any of these paths. Moreover, racing videos may be provided by routing them directly
25 from racetracks 12 to user television equipment 22, user computer equipment 20 (e.g., over the Internet or a private network, etc.), or user telephone equipment 32. Racing videos may also be provided by routing them through transaction processing and subscription
30 management system 24. If a cellular telephone or portable computing device has sufficient display capabilities to support moving images, racing videos

may be displayed. Such videos may be provided using any suitable path, such as a direct path from racetracks 12, a path through video production system 14 or other suitable video processing equipment, 5 through a hub such as transaction processing and subscription management system 24, etc. Racing videos may be provided in real time or may be recorded for later distribution. Videos that are not provided in real-time may be downloaded by user television 10 equipment 22, user computer equipment 20, a cellular telephone, or other suitable user equipment at a lower data rate than would otherwise be required and may be downloaded in the background if desired. Such videos may also be provided to the user at real-time video 15 rates for direct viewing by the user.

Racing data and other information related to the interactive wagering service may be provided to users over paths connected to transaction processing and subscription management system 24. For example, 20 racing data and other data for the service may be provided to user computer equipment 20 over path 44h using a modem link. Path 44h may be a private network path or an Internet path. Path 44h may use telephone lines, digital subscriber lines, ISDN lines, wireless 25 data paths, or any other suitable type of communications links. User television equipment 22 may receive data for the wagering service over communications path 44i, which may be a telephone line, digital subscriber line, ISDN line, or other suitable 30 type of communications path and which may use a private network path or an Internet path, etc.

The communications paths 44k that are used to connect various other components of the system typically do not carry high-bandwidth video signals. Accordingly, paths 44k may be telephone-like paths that are part of the Internet or a private network. Such paths and various other paths 44 may be dedicated connections for security, reliability, and economy.

30 User telephone equipment 32 may receive information for the wagering service via path 44m. If user telephone equipment 32 is a standard (non-cellular) telephone, such information may be in the

form of audio prompts ("press 1 to place a wager") and audio racing data ("the current win odds for horse 2 are 5-1"). Transaction data processing and subscription management system 24 may contain

- 5 interactive voice response equipment that provides such information to the user and that responds to touch-tone signals from the user when the user responds to prompts by pressing buttons on the user's telephone.

- If user telephone equipment is a cellular
10 telephone, racing data and other information for the interactive wagering service may be provided to the user by using a cellular wireless connection as part of path 44m. Users with cellular telephones may be provided with audio prompts using an interactive voice
15 response system located at transaction processing and subscription management system 24 to which the users may respond by pressing cellular telephone buttons to generate touch-tone signals.

- Racing data and other information for the
20 interactive wagering service may be provided to cellular telephones in the form of alphanumeric messages. Such messages may be transmitted to the user by using paging or other alphanumeric messaging formats or any other suitable data communications scheme. If
25 desired, data may be provided to the cellular telephones over the voice channel and decoded by the cellular telephone using modem circuitry or other suitable circuitry. Data may also be provided using any other suitable cellular or wireless path.
30 Regardless of the way in which racing data and other information for the interactive wagering service are provided to the cellular telephone, such information

054543 "00100

may be provided to the user by displaying it on the cellular telephone display screen or by presenting it in audible form through the speaker of the cellular telephone.

5 Racing data and other interactive wagering service information for the users may be provided in one or more continuous data streams, may be provided periodically (e.g., once per hour or once per day), or
10 which data is requested by a client processor (e.g., user television equipment 22, user computer equipment 20, user telephone equipment 32, or any other such equipment) from a server (e.g., a server implemented using computer equipment 26 at transaction processing
15 and subscription management system 24 or computer equipment at another suitable location. Videos may also be provided using any of these techniques.

 A return communications path between the user and the interactive wagering service may be used to
20 allow the user to place wagers and otherwise interact with the interactive wagering service. For example, a user with a standard telephone or a cellular telephone may interact with the service by pressing touch-tone keys on the telephone in response to audio prompts
25 provided by an interactive voice response system at transaction processing and subscription management system 24. If desired, users may call customer service representatives at customer service facility 36 and place wagers with manual assistance. The user of a
30 cellular telephone may interact with the wagering service by selecting menu options and otherwise interacting with information displayed on the cellular

telephone. When a selection is made, software implemented on the telephone may be used to assist the user in transmitting appropriate data (e.g., wagering data) to the wagering service. Such data may be
5 transmitted using any suitable technique. For example, data may be transmitted using a wireless data link that is separate from the cellular voice channels. Data may also be transmitted over the voice channel (e.g., using a modem built into the cellular telephone, by
10 automatically generating touch-tone signals that may be recognized by the interactive voice response system at transaction processing and subscription management system 24, or using any other suitable arrangement). These approaches may be used even if the user receives
15 racing data and other information for the service using a platform other than a telephone-based platform.

Users with user television equipment 22 may interact with the service by sending data (e.g., wager data) to transaction processing and subscription
20 management system 24 using path 44i or using paths 44f and 44j. Users with user computer equipment 20 may send data (e.g., wager data) to transaction processing and subscription management system 24 via path 44h or paths 44d and 44j. Users at any user equipment may
25 send data for the service to locations other than transaction processing and subscription management system 24. For example, the user may provide information directly to customer service facility 36, etc.

30 If desired, the user may send data to the service at transaction processing and subscription management system 24 using different paths than those

used to receive data from transaction processing and
subscription management system 24. For example, racing
data may be received at user television equipment 22
via paths 44j and 44f, whereas data may be sent by the
5 user from user television equipment 22 to transaction
processing and subscription management system 24 using
path 44i, etc. Moreover, the paths used to receive
certain video information may be different from those
used to receive racing data. For example, user
10 television equipment 22 may receive racing videos using
path 44f, but may receive racing data using path 44i.
These examples are merely illustrative. Any suitable
combination of paths may be used to distribute racing
data and other information for the interactive wagering
15 service, any suitable combination of paths may be used
to receive videos, and any suitable combination of
paths may be used to send data to the wagering service.

If desired, the user may interact with the
wagering service using more than one platform. For
20 example, the user may place a wager using a cellular
telephone while the user is driving home. When the
user arrives home, the user may determine the outcome
of the wager by watching a video of the race on user
television equipment. Later in the day, the user may
25 check the user's account balance using a personal
computer. This is merely an illustrative example. The
various wagering platforms may be used in any suitable
combination.

Although system 10 has been described in the
30 context of a system that supports multiple wagering
platforms, system 10 may support fewer platforms if
desired. For example, aspects of the invention may be

implemented using a system 10 that only supports cellular telephone wagering or wagering using handheld computer devices. If desired, system 10 may be configured so that it does not support personal
5 computer wagering, wagering with standard telephones, or wagering with user television equipment. The system may support cellular telephones and/or handheld computing devices such as personal digital assistants, palm-sized computers, etc. in combination with any
10 other suitable platform.

The criteria wagering features of the present invention are described herein primarily in the context of an interactive wagering application implemented on user television equipment such as a set-top box. This
15 is only illustrative. An interactive wagering application implemented on any suitable platform (user computer equipment, user telephone equipment, etc.) may be used to provide such features if desired.

The interactive wagering application may be
20 implemented using application software that runs primarily on a set-top box or other such local platform or using a remote server or other computer that is accessed from a local platform. Arrangements in which interactive wagering services are implemented using
25 software on remote computers that is accessed on-demand from local platforms may be referred to as client-server arrangements. Such client-server arrangements may be used to allow client processes on set-top boxes to access server processes running on servers located
30 at cable system headends or other television distribution facilities 18 (FIG. 1). Regardless of the type of system architecture or platform used, the

005116423 030400

software that supports the interactive wagering service features described herein may be referred to as an interactive wagering application.

0316423 030100

An illustrative display screen that may be provided by the interactive wagering application is shown in FIG. 2. Screens such as screen 46 of FIG. 2 may be accessed in a variety of ways. A user may initially be provided with an opportunity to launch the interactive wagering application. The system may allow the user to launch the application by pressing a menu option in an interactive television program guide or other set-top box application or menu. If desired, the application may be launched automatically whenever the user tunes to a particular channel (e.g., the television wagering channel). After the user has tuned to this channel, the system may display an interactive icon on the user's television screen that indicates that the interactive wagering application is available. If the user presses an "OK" remote control key, the system may launch the application.

The first screen displayed by the interactive wagering application when it is launched may be a pop-up menu that is displayed on top of the video for the television wagering channel. The menu may contain menu options that allow the user to inform the application that the user wishes to configure the system, to place a wager, etc. The user may select a set-up option from such a menu that causes the application to display a screen such as screen 46 of FIG. 2.

Screen 46 of FIG. 2 may contain selectable tab options such as tab option 48 (for setting options), tab option 50 (for setting automatic wagering

5 corresponding options associated with that tab are
displayed in option region 54.

Suitable criteria that may be used to trigger actions include the particular track at which a race is to be run (e.g., Churchill Downs), a particular horse, Jockey, or Trainer. Other suitable criteria include the surface for a race (e.g., turf), the distance of a race, or various race statistics. Criteria may also include the colors of a jockey's silks. If desired, criteria may include odds-based criteria. For example, a criteria may be whether the current odds for a horse have changed from the morning line odds for that horse by more than a certain amount, etc. These criteria are merely illustrative. Any suitable criteria may be used if desired.

30 The wagering application may determine when
the selected criteria have been satisfied by comparing
the wagering criteria to the racing data provided to

the application. The racing data may be provided by transaction processing and subscription management system 24 or may be otherwise accessed by the wagering application (e.g., by directly accessing the data in communications with totalizators 30, racing data collection and processing system 28, or other such equipment).

In the example of FIG. 2, the user has used highlight region 54 to select the criteria "horse," "surface," and "distance." These criteria may be highlighted (as indicated by the letter "H" on each of the selected criteria) by, for example, displaying them in a different color (for example, yellow) then the remaining criteria (which may be displayed, for example, in blue). As shown in FIG. 3, the interactive wagering application may then display a screen such as screen 56 in which the user is provided with an opportunity to fill in the entries for the criteria categories selected in screen 46 of FIG. 2. For example, action option 58 may be provided to allow the user to select which action is to be taken when the wager criteria are met. The user may navigate through the entries for option 58 by pressing right and left remote control arrows. The availability of additional entries for the option may be indicated with arrows 60. A highlight region 62 may be used to select desired options.

Suitable actions that may be taken when the wager criteria are met include displaying a reminder (prompt), alerting the user with an audible reminder, sending a reminder to the user as e-mail, a paging message, a telephone call, etc. E-mail messages may be

00516423 030400

distributed to users at user computer equipment 20
(FIG. 1), user television equipment 22, a cellular
telephone with e-mail capabilities, a handheld
computing device or other small portable device with e-
5 mail capabilities, etc. Paging and telephone calls may
be handled similarly. Wagers may be placed
automatically when the criteria are satisfied. If
desired, the user may be notified when a wager is
automatically placed. For example, the user may select
10 an option that directs the system to send an e-mail
message is sent to the user whenever the system
automatically places a wager based on the criteria
selected by the user.

 Selecting wagering criteria for certain
15 options such as horse option 64 may involve lists of
criteria with entries that are too numerous to easily
accommodate with a right/left arrow interface such as
used in connection with option 58. Such options may
use ancillary screens or other features to assist the
20 user in selecting desired wagering criteria. For
example, the number of horses from which a user may
select a desired horse or horses to establish as
wagering criteria may be too large to list on a single
screen. The system may therefore provide a search
25 interface such as the search interface shown in screen
66 of FIG. 4 whenever the user selects an option such
as option 64 of FIG. 3.

 As shown in FIG. 4, the arrangement of screen
66 provides the user with an opportunity to search for
30 a desired horse by entering at least part of the
horse's name. Within any given cell, up and down
remote control arrow keys may be used to select a

desired letter. Right and left arrow keys may be used to move between cells. Highlight region 70 indicates the user's current position. A list of horse names matching the letters entered by the user may be
5 displayed in region 72. The horse names may be displayed in real time as the user enters letters in the cells or may be displayed after the user initiates a search by entering letters in cells 68 and pressing a remote control OK key.

10 The arrangement of FIG. 4 is merely illustrative. Any other suitable user interface may be used for character-based searching. For example, an on-screen keyboard may be used in which the letters of the alphabet are displayed in a roughly rectangular
15 grid from which the user may select desired characters using a movable highlight region.

When the user presses the OK key after selecting desired characters using an arrangement such as the arrangement of FIG. 4, a display screen such as
20 display screen 74 of FIG. 5 may be provided. In display screen 74, highlight region 76 is positioned on top of a horse name that matches the characters selected by the user. The user may scroll up or down through the displayed horse names as indicated by
25 arrows 78. When the user locates a desired horse name, the user may press a remote control OK key to select that horse for horse option 64 of FIG. 3. An illustrative screen on which a horse name has been selected is shown in FIG. 6.

30 Different user interfaces may be provided to assist the user in selecting different types of wagering criteria. Some criteria, such as the action

criteria, may be best selected using an approach in which right and left arrow keys are used to display different possible entries. Other criteria, such as horse names, jockey names, tracks, etc., may be sufficiently extensive that they are best selected using a search feature or other assisted-selection arrangement.

Other criteria may be best selected using still different approaches. For example, when the user desires to select a desired distance criteria using distance option 80 of FIG. 3, the system may display a separate screen in which the available distances are arranged in two columns. The user may select the desired distance using a highlight region. This type of approach may be used whenever it is desired to provide more visual information for the user than the simple right/left arrow key approach in which the user selects from criteria that are displayed on the same line as the option.

These different approaches for selecting wagering criteria are merely illustrative. Any suitable approaches or combinations of such approaches may be used if desired. Such approaches may allow the user to select a single criteria or multiple criteria. Criteria may be combined using any suitable user-selected or default logic. For example, the default provided by the interactive wagering application may be that all criteria must be satisfied before a given action is taken (i.e., AND logic). As an alternative, or in combination with AND logic, OR logic or other suitable logic functions (including NOT functions and non-boolean, weighted logic functions) may be used.

5 6. If the selected action is that the system is to
automatically place a wager, the user may be provided
with an opportunity to select a wager type (using an
option such as option 84) and a wager amount (using an
option such as option 86). The criteria that are used
10 to trigger the automatic wager may be set using options
such as option 64 (used to select a desired horse),
option 82 (used to select a desired track surface), and
option 80 (used to select a desired race distance).

An expiration time may be set for automatic wagers. For example, the application or the user may establish a two-week time limit for wagers. No wagers
30 will be placed automatically after two weeks without further authorization. Any suitable time period may be used as a default or user-selected expiration time.

An expiration time may be set for automatic wagers. For example, the application or the user may establish a two-week time limit for wagers. No wagers
30 will be placed automatically after two weeks without further authorization. Any suitable time period may be used as a default or user-selected expiration time.

If desired, the wagering application may provide the user with an opportunity to define a time window during which a particular set of wager criteria are valid. For example, the application may allow the user to make wager criteria valid only on Saturdays and Sundays between the hours of 1:00 PM to 4:00 PM. The time window may involve multiple days of the week and multiple time windows during each day.

In the example of FIG. 6, the user has selected the wager type "WIN" and the wager amount "\$5." When the user presses the OK remote control key, the wagering application may provide the user with a summary of the conditions that have been established for criteria wagering, as shown in FIG. 7. The rows of screen 88 of FIG. 7, each contain information on a different set of automatic wagering criteria. For example, row 90 provides a summary of one set of criteria that have been established (i.e., a particular horse, a particular surface, and a particular distance) that when satisfied result in the automatic placing of a \$5 win wager. Row 92 provides a summary of another set of wagering criteria. When the criteria of row 92 have been satisfied, the wagering application may automatically place a \$10 win wager.

Screen 88 may contain options such as new option 94 (to create a new set of wagering criteria), delete option 96 (to delete one of the rows of wagering criteria), and view option 98 (to view additional information on a set of wagering criteria). The user may select one of these options using movable highlight region 100. If the user selects delete option 96 or view option 98, the wagering application may place a

movable highlight region on top of one of the rows in
FIG. 7. The user may use the highlight region to
select a desired row to delete or to select a desired
row for which it is desired to view additional
5 information.

As shown in FIG. 8, if the user selects view
option 98 of FIG. 7, the wagering application may
provide a display screen such as screen 102 in which
the view option is highlighted (as indicated by the
10 "H") by, e.g., being displayed in a color such as
yellow that is different than the color in which the
remaining options are displayed (e.g., blue).
Highlight region 104 of FIG. 8 may be used to select a
row. A screen such as screen 106 of FIG. 9 may be
15 displayed when the user selects one of the rows in
screen 102 of FIG. 8. In screen 106 of FIG. 9, a
wagering criteria details region 108 is displayed as an
overlay on top of the contents of screen 102 of FIG. 8.
Wagering criteria details region 108 may contain more
20 detailed information on the wagering criteria, the
wager type, and the wager amount that are associated
with the row that was selected in screen 102 of FIG. 8.
Wagering criteria details region 108 may contain, for
example, information on the name of the horse that was
25 selected and the type of surface. If desired, the
information displayed in region 110 of wagering
criteria region 108 may be scrolled (e.g., using up and
down arrow keys). The user may cancel the presentation
of the wagering criteria details region 108 (the
30 overlay) by pressing the OK remote control key.

Region 112 of screen 106 of FIG. 9 (and other
screens such as the screens of FIGS. 2-8) may be used

to display racing-related information. For example, region 112 may be used to display information on the scheduled race times for the first race at various tracks. A region such as region 112 may also be used
5 to display a "ticket" that includes information on the wagering criteria that the user has selected for criteria-based wagering (i.e., automatic wagering, wager notifications, and the like). If desired, region 112 may be used to display advertisements or to provide
10 other services (e.g., information services, services related to ordering products or services, etc.).

Illustrative steps involved in using system 10 (FIG. 1) to provide an interactive wagering service with criteria wagering capabilities are shown in FIG. 10. At step 114, the wagering application may provide the user with an opportunity to select wagering criteria. For example, the wagering application may provide on-screen options that allow the user to select desired wagering criteria from various lists or groups
15 of criteria. Search capabilities may be provided to facilitate the searching for criteria of interest when there are many possible selections to be made (e.g., when selecting a desired horse name, jockey name, racetrack, etc.). Criteria may also be selected using
20 other suitable input interfaces such as voice recognition systems, interactive voice response systems, interfaces using pointing devices such as trackballs, mice, touch pads, etc. Any other suitable arrangement or a combination of these arrangements may
25 be used if desired.
30

The wagering criteria that may be selected may be any suitable racing-related characteristics,

such as horse name, racetrack surface, jockey name, trainer name, racetrack surface, racetrack distance, statistics, silks (i.e., the colors worn by the jockey for a particular horse), etc. These are merely
5 illustrative examples, any suitable type of race-related or wagering-related information may be used as wagering criteria if desired.

After the user has selected certain wagering criteria at step 114, the wagering application may
10 provide the user with an opportunity at step 116 to direct the application to place wagers automatically, to notify the user when the criteria have been satisfied, to both place a wager and notify the user, or to perform any other suitable action or combination
15 of such actions. Automatic wagers may be placed using transaction processing and subscription management system 24 (FIG. 1). Confirmations may be provided for each wager. For example, an e-mail message or the like may be provided to the user. The e-mail message may
20 contain information on the placed wager such as the horse, racetrack, jockey, wager type, wager amount, etc.

The user may be notified when the criteria are satisfied using an on-screen prompt (e.g., a pop-up
25 overlay that is displayed over a television program that the user is watching or other information that is currently being displayed). The user may also be notified when the criteria are satisfied by alerting the user with an audible reminder. The user may be
30 notified by sending a reminder to the user as e-mail, a paging message, or other suitable electronic message. Transaction processing and subscription management

system 24 may notify the user that the criteria have been satisfied by placing a telephone call to the user. Notifications may be distributed to users at user computer equipment 20 (FIG. 1), user television equipment 22, or user telephone equipment 32. For example, e-mail notifications may be provided to users with a cellular telephone with e-mail capabilities, a handheld computing device or other small portable device with e-mail capabilities, etc. Paging messages and telephone calls may be handled similarly.

If desired, notifications may be provided to users with a different platform than the platform that is used to establish the wagering criteria. For example, the user may provide the wagering application with the wagering criteria by pressing touch tone telephone buttons in response to audible prompts from interactive voice response equipment at transaction processing and subscription management system 24 (FIG. 1). The user may be notified when the criteria have been satisfied using an e-mail message to the user's personal computer at work or an electronic message sent to the user's handheld computing device. These are merely illustrative examples of suitable arrangements for notifying the user when the wagering criteria have been satisfied. Any suitable notification arrangement may be used. If desired, when certain wagering criteria are satisfied the wagering application may both place an automatic wager and notify the user.

If the action selected at step 116 is an automatic wager, the wagering application may provide the user with an opportunity to specify a desired wager type and desired wager amount at step 118.

The foregoing is merely illustrative of the principles of this invention and various modifications can be made by those skilled in the art without
25 departing from the scope and spirit of the invention.

The foregoing is merely illustrative of the principles of this invention and various modifications can be made by those skilled in the art without
25 departing from the scope and spirit of the invention.

What Is Claimed is:

1. A method for interactive wagering with an interactive wagering application implemented using user equipment, comprising:

allowing a user at the user equipment to use the interactive wagering application to select desired wagering criteria;

using the interactive wagering application to determine whether a desired wagering opportunity exists by determining whether the wagering criteria are satisfied; and

using the interactive wagering application to automatically take a particular action whenever the wagering criteria are satisfied.

2. The method defined in claim 1 further comprising using the interactive wagering application to provide the user with an opportunity to select which particular action is taken whenever the wagering criteria are satisfied.

3. The method defined in claim 1 wherein the interactive wagering application is implemented using user television equipment, the method further comprising using the interactive wagering application implemented on the user television equipment to determine whether the wagering criteria are satisfied.

4. The method defined in claim 1 further comprising using the interactive wagering application to provide the user with an opportunity to select a particular racetrack as one of the wagering criteria.

5. The method defined in claim 1 further comprising using the interactive wagering application to provide the user with an opportunity to select a particular horse as one of the wagering criteria.

6. The method defined in claim 1 further comprising using the interactive wagering application to provide the user with an opportunity to select a particular horse as one of the wagering criteria by searching for a desired horse with an on-screen user interface that allows the user to enter a search character string with a remote control.

7. The method defined in claim 1 further comprising using the interactive wagering application to provide the user with an opportunity to select a particular jockey as one of the wagering criteria.

8. The method defined in claim 1 further comprising using the interactive wagering application to provide the user with an opportunity to select a particular trainer as one of the wagering criteria.

9. The method defined in claim 1 further comprising using the interactive wagering application to provide the user with an opportunity to select a particular track surface as one of the wagering criteria.

10. The method defined in claim 1 further comprising using the interactive wagering application to provide the user with an opportunity to select a

associated with the wagering criteria prior to the automatic placing of the wager.

16. The method defined in claim 1 wherein there are multiple sets of wagering criteria established by the user each with an associated action to be taken when that set of wagering criteria is satisfied, the method further comprising providing the user with an opportunity to select a different wager amount and wager type for each of the multiple sets of wagering criteria.

17. The method defined in claim 1 further comprising providing different user interfaces with the wagering application for selecting different types of wagering criteria.

18. The method defined in claim 1 further comprising providing the user with an opportunity to select whether the action taken involves notification of the user.

19. The method defined in claim 1 wherein the action taken involves notification of the user at a set-top box connected to a television, the method further comprising notifying the user by displaying a partial-screen overlay message on top of a screen currently being displayed on the television.

20. The method defined in claim 1 wherein the action taken involves notification of the user, the method further comprising notifying the user that the

wagering criteria have been satisfied using an e-mail message.

21. The method defined in claim 1 wherein the action taken involves notification of the user, the method further comprising notifying the user that the wagering criteria have been satisfied using a wireless message.

22. The method defined in claim 1 wherein the action taken involves notification of the user at a set-top box connected to a television, the method further comprising notifying the user that the wagering criteria have been satisfied by displaying a message on the television.

23. The method defined in claim 1 further comprising using the wagering application to provide a display screen containing a summary of which types of wagering criteria have been established.

24. The method defined in claim 1 further comprising using the wagering application to provide a display screen containing a summary of which types of wagering criteria have been established, wherein the summary includes information on wager amounts and wager types that the user has established for use whenever various sets of wagering criteria are satisfied.

25. The method defined in claim 1 further comprising:

using the wagering application to provide a display screen containing a summary of which types of wagering criteria have been established, wherein the summary includes information on wager amounts and wager types that the user has established for use whenever various sets of wagering criteria are satisfied; and

displaying wagering criteria details for a given one of the sets of wagering criteria when the user selects that set from the summary.

26. The method defined in claim 1 further comprising using the wagering application to limit automatic wagering based on monetary wagering limits.

27. The method defined in claim 1 further comprising:

providing the user with an opportunity to select a desired monetary wagering limit; and

using the wagering application to limit automatic wagering based on the monetary wagering limit.

28. The method defined in claim 1 further comprising using the wagering application to provide the user with an opportunity to select an expiration time for automatic wagering.

29. A method for interactive wagering on horse races with an interactive wagering application implemented using a set-top box connected to a television, comprising:

providing a user with an opportunity to select a given horse using the interactive wagering application; and

automatically placing a wager for the given horse when it is determined that the given horse is to run in a particular race.

30. The method defined in claim 29 further comprising providing the user with an opportunity to select the amount of the wager and the wager type with the interactive wagering application.

31. The method defined in claim 29 further comprising:

providing the user with an opportunity to select multiple horses using the wagering application; and

automatically placing wagers for each horse when it is determined that the horse is to run in a particular race.

32. An interactive wagering system in which an interactive wagering application is used to provide a user with an opportunity to place wagers on races to be run, comprising:

user television equipment configured to:

provide the user with an opportunity to select a given horse using the interactive wagering application; and

automatically place a wager for the given horse when it is determined that the given horse is to run in a particular race; and

Abstract of the Disclosure

5 wagering opportunity is available that satisfies the
user's selected criteria, the wagering application may
take an appropriate action. The wagering application
may, for example, automatically place a wager or may
notify a user that the criteria have been satisfied.

10 Wagering criteria may be based on a particular track,
horse, jockey, trainer, racetrack surface, race
distance, statistics, jockey silks, odds or changes in
odds, etc.

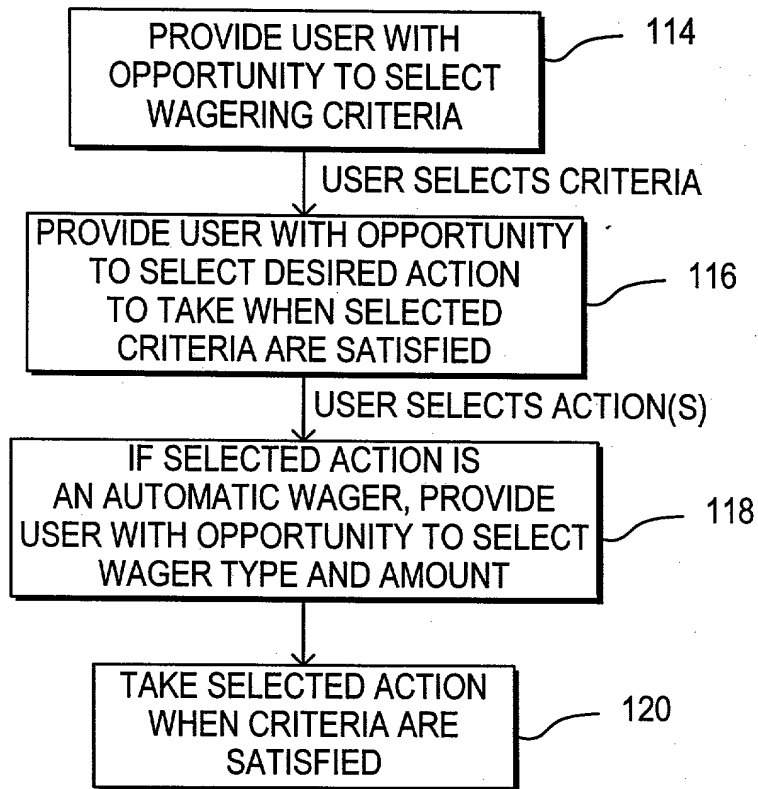

FIG. 10

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name;

I believe I am an original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

INTERACTIVE WAGERING SYSTEM WITH CRITERIA WAGERING

the specification of which

☒ [X] is attached hereto

☐ [] was filed on _____ as
Application Serial No. _____.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims.

I do not know and do not believe that the invention was ever patented or described in any printed publication in any country before my or our invention thereof or more than one year prior to this application.

I do not know and do not believe that the invention was in public use or on sale in the United States of America more than one year prior to this application.

I acknowledge the duty to disclose to the United States Patent and Trademark Office all information known by me to be material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56.

I hereby claim foreign priority benefits under Title 35, United States Code, § 119(a)-(d) of any foreign application(s) for patent or inventor's certificate listed below and have also identified below any foreign application for patent or inventor's certificate having
